Envello Cladding

Envello cladding has been hand-moulded from carefully selected natural timbers and hand-coloured by our master craftsmen, Envello provides an unmistakably organic look that only requires an occasional clean to preserve its beauty.

From the clean finish of the Shadow Line⁺ to the profiled grain variance of the Board & Batten, there's an Envello Cladding option for every property type. Years of development means this product is designed to stand the test of time.

The boards lock together with a specially designed tongue and groove for added rigidity and increased installation speed. The tongue and groove has been profiled with a relief angle to allow the boards to curve when used vertically, as well as limiting the passage of air and water through the system. The tongue of the board features a notch which the fixings are aligned with, the next board then covers over the fixing creating a clean finish. The distinctive chamfered cut of the profiles also enables the rain to naturally clean the boards, reducing the need for manual cleaning or treatment.

Our newest innovation to this range is Shadow Line⁺, which has a smooth flat grained finish and carries a fire rating of Euroclass D (BS EN 13501-1).

Both profile of boards can be installed horizontally or vertically, depending on the nature of the design.

Hand moulded and coloured

Skilfully moulded by hand and authentically coloured, replicating timber in the most realistic way.

Impact and weather resistant

A durable coating and elastomeric surface ensures increased resilience against hail and natural weathering.

Moisture resistant

Due to Envello's non-porous composition, no sealing is required, unlike other available products.

Easy to install

No specialist tools required, Envello can be cut and installed in the same way as traditional timber.

UV stability

UV stabilised for better performance and fade resistance over time.

Wood free

Envello is solid, not hollow, making it strong. This means it will not rot or warp like timber.

Increased thermal performance

The unique composition helps to enhance the thermal performance of buildings in both winter and summer.

Fire rated system (Shadow Line⁺ only)

Certified to a Euroclass D rating (BS EN 13501-1) by a UKAS accredited laboratory, when fitted in accordance with our installation guide.

Perfectly imperfect

Each length of Millboard Envello cladding is the result of a long process of craftsmanship and attention to visual detail. Just like the specially selected Oak timbers used to create the unique moulds, the fine details and natural imperfections in the original timber has been recreated to be highly durable.

From the initial laying of the elastomeric surface, right through to the pouring of the fibre-reinforced resin mineral, we focus on achieving the quality of finish, reflecting the true random and natural characteristics of the original timber. Our passion is to accurately reproduce the original whilst adding to the benefits of our unique board technology, this is why many of our processes are carried out manually. For example, each piece is hand coloured to establish the authentic wood finish our boards are renowned for.

Tough

The unique surface layer is more resistant to scratches and is designed to better withstand demanding outdoor environments.

Enduring

The dual-tone surface layer is hand coloured using pigments designed to improve resistance to sun damage and fading.

Beautiful

Each length is hand moulded using specially selected timber masters for an unrivalled organic wood-grain appearance in a composite material.

Fire rated

Shadow Line⁺ is fire rated to Euroclass D (BS EN 13501-1) for added assurance and quality.

Fire rating **does not** apply to Board & Batten.

Wood free

Millboard cladding is wood-free and non-porous which, in comparison to timber, means there's no leaching or releasing of tannins to other surfaces.

Stronger

The structural core is a blend of natural minerals bonded in a polymer resin with renewable biopolymers and fibre reinforcement for added strength and durability.

Lightweight

Our unique closed 'cellular' internal structure reduces weight while maintaining strength and increasing thermal performance.

Durable

Millboard Envello will not split, rot or harbour insects like timber does

Envello Shadow Line⁺

The grooved profile created between boards gives visual definition to the individual grain patterns.

The Envello Shadow Line⁺ cladding board has been moulded from real oak masters and designed to perfectly replicate smooth timber with a flat grained finish, giving a clean authentic look. The increased width of the Shadow Line⁺ board compared to standard timber boards means there is larger grain detail. This gives an enhanced visual impact, without risk of the board twisting or warping over time.

Tested to the rigorous demands of BS EN 13501-1, the Shadow Line⁺ system achieves a classification of Euroclass D. This fire rating also includes the accessory items through a full system build-up, this includes new Reveal Boards, Corner Profiles and Coloured Head Screws.

The formulation of the Shadow Line⁺ still continues the unique overall Millboard composition of a resin mineral mix, however has now been specially formulated to achieve the fire rating.

Like wood, no two Millboard Envello boards are the same colour, with the subtle differences giving the most natural appearance. This is to give your cladding all the good looks of timber, but with none of the maintenance drawbacks associated with it.

Colour options - Shadow Line⁺

Shadow Line⁺ is also now available in our lightest colour, Limed Oak.

A highly requested addition to the range, Limed Oak has a pale, washed appearance which is the perfect complement to outdoor spaces in sunnier climates.

Limed Oak provides a clean and dreamy aesthetic. Its cool and sophisticated presence allows you to create a refined finish, whatever the brief.

Envello Board & Batten

A truly unique balance for both contemporary and traditional designs

Our Board & Batten collection has been moulded from individual pieces of timber with a range of different masters, creating a truly unique balance for both contemporary and traditional designs. With a tongue and groove profile that only requires fixings through the tongue, the install time is dramatically reduced compared to the traditional method of timber batten-on-board cladding. The profiles on the Board & Batten are designed with differing angles to create shadow definition between the grain patterns, as well as facilitating drainage when used horizontally.
